

## INFORMATION FOR AUTHORS

*MUSIC PERCEPTION* publishes original theoretical and empirical papers, methodological articles, and critical reviews concerning the study of music perception and related topics. Articles are welcomed from a broad range of disciplines, including psychology, psychophysics, neuroscience, music theory, acoustics, artificial intelligence, linguistics, philosophy, anthropology, and cognitive science. The journal publishes in the English language.

Authors are requested to submit two pdf files to the editorial office (Music Perception Journal <mpercep@queensu.ca>); one file should contain line numbers, the other should be without numbers. Electronic copies should be two single PDF files that include text, references, tables, and figures. Hard copy is no longer required. For accepted manuscripts *only*, a Microsoft Word version of the final version will be required for copy editing. LaTeX is not acceptable. If receipt of the manuscript is not acknowledged within three working days, please contact the editor (Lola L. Cuddy <Lola.Cuddy@queensu.ca>).

Manuscripts are accepted for review on the understanding that they have not been published and are not presently submitted for publication elsewhere. Where relevant, authors should indicate in a cover letter that ethical clearance was obtained for experimental data collection and ethical guidelines followed. The review process is not blind, that is, reviewers are typically aware of the identities of the authors. Authors who wish to have their identities withheld from reviewers should make a specific request in the cover letter accompanying the submission.

There are no explicit length restrictions for acceptability of standard articles. Research Reports not exceeding 3000 words, and Notes and Comments, critical comment on articles published here and elsewhere and not exceeding 1000 words, are welcome.

Books for consideration for review should be sent to the Editor.

**FORM AND STYLE** Accepted manuscripts must be submitted in Microsoft Word format. The journal adheres to the sixth edition of the Publication Manual of the American Psychological Association regarding form and style. **The manual should be consulted for specific items not covered in the general list below.**

**ORGANIZATION** Manuscripts should be double-spaced throughout, including references, footnotes,

tables, and figure captions. For the hard copy, leave margins of 1–1.5 inches (2.5–4 cm) on all sides. Pages should be numbered consecutively throughout. Page 1 should consist of the running head (up to 50 characters), the title of the article (recommended: no more than 12 words), and the authors' names and affiliations (see APA 6th, Chapter 2). Page 2 should contain a short abstract of 100–200 words. At the end of the abstract please list five keywords or phrases. The text should follow, starting on a separate page. References, appendices, author note (including name and complete mailing/e-mail address for correspondence), and footnotes should follow in that order, each starting on a new page. These should be followed by tables, each on a separate page, then by figure captions, starting on a new page, and then figures, each on a separate page.

**HEADINGS** Appropriate headings and subheadings should indicate the organization of the paper (see APA 6th, Chapter 3).

**PARTICIPANTS** Use of the term “participant” is preferred, but “subject” is permitted.

**EQUATIONS** Displayed equations should be numbered consecutively. The number should be placed in parentheses to the extreme right of the equation.

**RESULTS** Refer to APA 6th (Chapter 4) for guidance on presentation of statistics in text, including statistical abbreviations and symbols. Use a zero before a decimal point when numbers are less than one, unless the number cannot be greater than one (e.g., correlations, levels of statistical significance). Report to two decimal places (some exceptions: more decimal places may be reported for Bonferroni tests and exact randomization probabilities). Include degrees of freedom when reporting, for example,  $F$ ,  $r$ ,  $R$ , and  $\chi^2$  statistics. When reporting results of ANOVA, the inclusion of MSE or effect size is recommended.

**REFERENCES** Within the text, references should be cited by surname of the author, followed by the year of publication in parentheses; for example, “Jones (1970) has shown that. . .” When there are two authors, cite both names, as (Smith & Jones, 1973). When there are more than two authors, cite all authors the first time the reference occurs. When there are six or more authors, use et al. for each occurrence. In subsequent citations, give the surname of the first author followed by et al. and the year of publication, as (Smith, Jones, &

Cooper, 1975) and (Smith et al., 1975). References should be typed starting on a separate page (double spaced, no extra carriage returns between citations, and in hanging indent format where, for each citation, the first line is flush left and subsequent lines are indented), and arranged alphabetically by the names of the authors. It is the responsibility of the author(s) to ensure the accuracy of all entries in the reference list. Journal names should be written out in full. Page numbers for all chapters in books and proceedings must be included, and issue numbers only included if the journal paginates each issue from the number "1." The following examples show the style of referencing required (see APA 6th Chapters 6 and 7 for further guidelines):

ESTES, W. K. (1972). An associative basis for coding and organization in memory. In A. W. Melton & E. Martin (Eds.), *Coding processes in human memory* (pp. 107–132). Washington, DC: Winston.

HANDEL, S. (1973). Temporal segmentation of repeating auditory patterns. *Journal of Experimental Psychology*, 101, 46–54.

MEYER, L. B. (1973). *Explaining music: Essays and explorations*. Berkeley, CA: University of California Press.

**FOOTNOTES** Authors are asked to use footnotes judiciously and, in most cases, to integrate important information in the text (see APA 6th, Chapter 2).

**TABLES** Tables must be formatted using the table function in Word, not using tabs or spaces (see formatted examples, starting APA 6th, Chapter 5). These should be numbered consecutively with Arabic numerals in order of appearance within the text. Each table should be typed on a separate page. A short descriptive title should be typed below the table number. Indicate in the text the approximate place where the table is to be inserted.

**FIGURES AND FIGURE CAPTIONS** Refer to APA 6th, Chapter 5, for figure preparation guidelines. Use a sans serif font (e.g., Helvetica, minimum 8 pt, maximum 14 pt). Symbols should be no larger than 4 pt. Axes labels should be centered, in capital then lowercase letters with units of measurement in parentheses. Indicate in the text the appropriate place where the figure is to be inserted. The figures should be numbered with Arabic numerals in order of appearance in the text. Figure captions should be typed consecutively on a separate page preceding the figures. For the review process,

include the figures in the single PDF file. For accepted manuscripts, publication requirements are black and white or grayscale images saved as 300 dpi Photoshop TIFF files, line art (black and white figures) created in Illustrator and saved at 1200 dpi as EPS files, and music notation saved as EPS files. Note: UC Press does not pay for color images in the journal. If an author strongly prefers her/his images to be printed in color, the Press will obtain an estimate and the author will be invoiced by the Press for these costs.

#### *Including Supplementary Materials*

*Music Perception* allows the provision of supplementary materials in the online version of the journal. Supplementary files should be submitted at the time of the regular submission of a manuscript.

Authors wishing to include supplementary files along with their articles should be familiar with and adhere to the following best practices.

1. Support for supplementary materials is intended for binary data files that enhance or supplement a document, but that are not discussed as part of the document or essential to the conclusions of the text.
2. The most common document types that are used as supplementary materials are: Microsoft Office documents, datasets, audio, video, and text files. When choosing file types - particularly for audio and video files - keep in mind that users will need to download and play these files so it is important to use formats that are supported in the most common players (e.g. QuickTime, Windows Media Player).
3. Also because users will have to download these files, they should be no bigger than 10 MB in sizes - and in most cases they should be between 100K and 3MB - so that users will be able to quickly download them. For larger files, it may be possible to compress them into a .zip file in order to reduce the file size.
4. Keep file names as short as possible, yet distinct from each other. (E.g. Figure1.jpg, Figure2.jpg, supplement1.pdf, supplement2.pdf, etc.)
5. *Music Perception* does not support inclusion of executable files (e.g., .bat, .app, .com, .cgi, .exe) as supplementary material. This includes the inclusion of executable files as part of a .zip or .tar file.

## ANNOUNCEMENTS

To submit an announcement for inclusion in *Music Perception*, e-mail [christine.koh@queensu.ca](mailto:christine.koh@queensu.ca) and attach the announcement in Word format. Announcements will be published as production timing and space allow.

---

**CONFERENCE ANNOUNCEMENT**

**Conference on Computer Simulation of Musical Creativity**

June 17-19, 2016  
University of Huddersfield, United Kingdom

We're happy to announce the first Conference on Computer Simulation of Musical Creativity. The event will be held at the University of Huddersfield (UK) from June

17-19, 2016. Details can be found at the conference website: <https://csmc2016.wordpress.com/>

*Keynote Speakers*

- Professor Graeme Bailey, Cornell University
- Professor Geraint Wiggins, Queen Mary University London

For enquiries, please contact Valerio Velardo at [valerio.velardo@hud.ac.uk](mailto:valerio.velardo@hud.ac.uk)

---

**CONFERENCE ANNOUNCEMENT**

**ICMPC14**

July 5-9, 2016  
San Francisco, California

We welcome you to join us at the 14th biennial International Conference on Music Perception and Cognition, held at the Hyatt Regency Hotel in downtown San Francisco, July 5 through 9, 2016. San Francisco boasts an extraordinarily diverse music scene. One can hear everything from African to Zydeco in a host of venues. San Francisco is also home to a prestigious symphony, opera, great chamber music and a lively new music scene.

Aside from its amazing music scene, the San Francisco Bay Area is a world-class hub for science and technology. The Bay Area includes Silicone Valley, home to numerous tech-startups and tech-giants such as Apple,

Cisco, Google, Intel, and Oracle, to name a few. Furthermore, the San Francisco Bay Area is a home to major music technology companies including Dolby, Meyer Sound, Pandora, Shazam, Smule, Spotify, and Soundcloud.

In addition to the multitude of tech companies, multiple top-tier universities reside in the area, including the University of California San Francisco (UCSF), Stanford University, UC Davis and UC Berkeley. As such, the organizing committee for ICMPC14 consists of members from each of these universities to highlight the diversity and friendly, collaborative atmosphere in the Bay Area. We believe the unique mixture of science and technology in the Bay Area will create an exceptional experience for attendees at ICMPC14 as it will bring together leaders in both academia and industry.

For additional information, visit <http://www.icmpc.org/>

## UPCOMING ISSUES

- > > Analysis, Performance, and Tension Perception of an Unmeasured Prelude for Harpsichord  
MEGHAN GOODCHILD, BRUNO GINGRAS, & STEPHEN McADAMS
- > > Motor and Audiovisual Learning Consolidate Auditory Memory of Tonally Ambiguous Melodies  
ANDREA SCHIAVIO & RENEE TIMMERS
- > > Language Priming by Music and Speech: Evidence of a Shared Processing Mechanism  
MELISSA K. JUNGERS, JULIE M. HUPP, & SARA D. DICKERSON
- > > Moving Music: Correspondences of Musical Parameters and Movement Dimensions in Children's Motion and Verbal Responses  
DAFNA KOHN & ZOHAR EITAN
- > > Hearing the Beat: Young Children's Perceptual Sensitivity to Beat Alignment Varies According to Metric Structure  
KATHLEEN M. EINARSON & LAUREL J. TRAINOR
- > > Memory of a Tonal Center after Modulation  
MORWAREAD M. FARBOOD
- > > Rhythm in the Speech and Music of Jazz and Riddim Musicians  
ANGELA CARPENTER & ANDREA G. LEVITT
- > > Modeling Perceptions of Valence in Diverse Music: Roles of Acoustic Features, Agency and Individual Variation  
ROGER T. DEAN & FREYA BAILES
- > > The Asymmetrical Influence of Timing Asynchrony of Bass Guitar and Drum Sounds on Groove  
SOYOGU MATSUSHITA & SHINGO NOMURA
- > > Pitch Error Coding The Sight Read, Practice, and Performance of an Elite Oboist: Developing a Protocol Based on the Serial Distance Hypothesis, Implication-Realization Model, and Schema Theory  
DEBORAH L. E. de GRAAFF & EMERY SCHUBERT
- > > Association of Meaning in Program Music: On Denotation, Inherence, and Onomatopoeia  
MIHAILO ANTOVIĆ, DUŠAN STAMENKOVIĆ, & VLADIMIR FIGAR
- > > Repetition and Prominence: The Probabilistic Structure of Melodic and Non-Melodic Lines  
BEN DUANE
- > > Benefits of Music on Verbal Learning and Memory: How and When Does it Work?  
LAURA FERRERI & LAURA VERGA
- > > The Working Memory of Musicians and Nonmusicians  
FRANCESCA TALAMINI, BARBARA CARRETTI, & MASSIMO GRASSI
- > > Multi-scale Modelling of Segmentation: Effect of Music Training and Experimental Task  
MARTÍN HARTMANN, OLIVIER LARTILLOT, & PETRI TOIVIAINEN
- > > Information Distribution Within Musical Segments  
ANTONI B. CHAN & JANET H. HSIAO
- > > Individual Differences in Music-Perceived Emotions: The Influence of Externally-Oriented Thinking  
LIILA TARUFFI, RORY ALLEN, JOHN DOWNING, & PAMELA HEATON
- > > Perceiving Boundaries in Unfamiliar Turkish Makam Music: Evidence for Gestalt Universals?  
ESRA MUNGAN, Z. FUNDA YAZICI, & MUSTAFA (UĞUR) KAYA

- > > Swing Rhythm in Classic Drum Breaks From Hip-Hop's Breakbeat Canon  
ANDREW V. FRANE
- > > Systematic Variation in Rhythm Production as Tempo Changes  
SCOTT BARTON, LAURA GETZ, & MICHAEL KUBOVY

Music Perception  
Contents of Volume 33

Number 1, September 2015

STEPHEN McADAMS, ALEXANDER ROZIN, & DAVID TEMPERLEY	1	Introduction to the Two Special Issues of <i>Music Perception</i> on <i>BKN25: Milestones in Music Cognition</i>
CAROLINE PALMER	3	Listening, Imagining, Performing: Melody As A Life Cycle of Musical Thought
ALBERT S. BREGMAN	12	Progress in Understanding Auditory Scene Analysis
CAROL LYNNE KRUMHANSL	20	Statistics, Structure, and Style in Music
EUGENE NARMOUR	32	Toward a Unified Theory of the I-R Model (Part 1): Parametric Scales and Their Analogically Isomorphic Structures
CLAUDE ALAIN & LORI J. BERNSTEIN	70	Auditory Scene Analysis: Tales from Cognitive Neurosciences
FRED LERDAHL	83	Concepts and Representations of Musical Hierarchies
FRANK A. RUSSO, WILLIAM FORDE THOMPSON, & LOLA L. CUDDY	96	Effects of Emergent-Level Structure on Melodic Processing Difficulty
ZUZANA CENKEROVÁ & RICHARD PARNCUTT	110	Style-Dependency of Melodic Expectation: Changing the Rules in Real Time

Number 2, December 2015

RICHARD A. WARREN & MEAGAN E. CURTIS	135	The Actual vs. Predicted Effects of Intonation Accuracy on Vocal Performance Quality
KAHL HELLMER & GUY MADISON	147	Quantifying Microtiming Patterning and Variability in Drum Kit Recordings: A Method and Some Data
STEPHEN C. VAN HEDGER, ANDERS HOGSTROM, CAROLINE PALMER, & HOWARD C. NUSBAUM	163	Sleep Consolidation of Musical Competence
HILA TAMIR-OSTROVER & ZOHAR EITAN	179	Higher is Faster: Pitch Register and Tempo Preferences
LASSI A. LIIKKANEN, KELLY JAKUBOWSKI, & JUKKA M. TOIVANEN	199	Catching Earworms on Twitter: Using Big Data to Study Involuntary Musical Imagery

ERKKI HUOVINEN & ANNA-KAISA KAILA	217	The Semantics of Musical Topoi: An Empirical Approach
RASMUS BÅÅTH	244	Subjective Rhythmization: A Replication and an Assessment of Two Theoretical Explanations
JOSEPH R. DANIELE & ANIRUDDH D. PATEL	255	Stability and Change in Rhythmic Patterning Across a Composer's Lifetime: A Study of Four Famous Composers Using the nPVI Equation

Number 3, February 2016

LOLA L. CUDDY	273	Introduction to the Second Special Issue of <i>Music Perception</i> on <i>BKN25: Milestones in Music Cognition</i>
JENINE L. BROWN	274	The Psychological Representation of Musical Intervals in a Twelve-Tone Context
CHELSEA DOUGLAS, JASON NOBLE, & STEPHEN McADAMS	287	Auditory Scene Analysis and the Perception of Sound Mass in Ligeti's <i>Continuum</i>
CECILIA TAHER, RENÉ RUSCH, & STEPHEN McADAMS	306	Effects of Repetition on Attention in Two-Part Counterpoint
EDWARD W. LARGE, JI CHUL KIM, NICOLE KRISTINE FLAIG, JAMSHED J. BHARUCHA, & CAROL LYNNE KRUMHANSL	319	A Neurodynamic Account of Musical Tonality
LINCOLN G. CRATON, DANIEL S. JUERGENS, HANNAH R. MICHALAK, & CHRISTOPHER R. POIRIER	332	Roll Over Beethoven? An Initial Investigation of Listeners' Perception of Chords Used in Rock Music
ELAINE CHEW	344	Playing with the Edge: Tipping Points and the Role of Tonality
RACHNA RAMAN & W. JAY DOWLING	367	Real-Time Probing of Modulations in South Indian Classical (Carnātic) Music by Indian and Western Musicians

Number 4, April 2016

CUNMEI JIANG, FANG LIU, & WILLIAM FORDE THOMPSON	401	Impaired Explicit Processing of Musical Syntax and Tonality in a Group of Mandarin-Speaking Congenital Amusics
NIELS CHR. HANSEN, MAKIKO SADAKATA, & MARCUS PEARCE	414	Nonlinear Changes in the Rhythm of European Art Music: Quantitative Support for Historical Musicology
MACIEJ KOMOSINSKI & AGNIESZKA MENSFELT	432	Emotions Perceived and Emotions Experienced in Response to Computer-Generated Music

- ALICE MADDO PROVERBIO & ANDREA ORLANDI 446 Instrument-Specific Effects of Musical Expertise on Audiovisual Processing (Clarinet vs. Violin)
- JONNA K. VUOSKOSKI, MARC R. THOMPSON, CHARLES SPENCE, & ERIC F. CLARKE 457 Interaction of Sight and Sound in the Perception and Experience of Musical Performance
- YADING SONG, SIMON DIXON, MARCUS T. PEARCE, & ANDREA R. HALPERN 472 Perceived and Induced Emotion Responses to Popular Music: Categorical and Dimensional Models
- RACHEL M. VAN BESOUW, BENJAMIN R. OLIVER, MARY L. GRASMEDER, SARAH M. HODKINSON, & HEIDI SOLHEIM 493 Evaluation of An Interactive Music Awareness Program for Cochlear Implant Recipients

RESEARCH REPORT

- ELIZABETH HELLMUTH MARGULIS & RHIMMON SIMCHY-GROSS 509 Repetition Enhances the Musicality of Randomly Generated Tone Sequences

BOOK REVIEWS

- RORY ALLEN & PAMELA HEATON 515 *You Are The Music: How Music Reveals What It Means To Be Human* by Victoria Williamson & *Music, Thought, and Feeling: Understanding The Psychology Of Music* by William Forde Thompson

Number 5, June 2016

- ESTHER COOREVITS & DIRK MOELANTS 523 Tempo in Baroque Music and Dance
- AYSU ERDEMIR & JOHN J. RIESER 546 Singing Without Hearing: The Use of Auditory and Motor Information When Singers, Instrumentalists, and Nonmusicians Sing a Familiar Tune
- MARTIN NORGAARD, SAMANTHA N. EMERSON, KIMBERLY DAWN, & JAMES D. FIDLON 561 Creating Under Pressure: Effects of Divided Attention on the Improvised Output of Skilled Jazz Pianists
- JAN STUPACHER, MICHAEL J. HOVE, & PETR JANATA 571 Audio Features Underlying Perceived Groove and Sensorimotor Synchronization in Music
- STEVEN M. DEMOREST, STEVEN J. MORRISON, VU Q. NGUYEN, & ERIN N. BODNAR 590 The Influence of Contextual Cues on Cultural Bias in Music Memory
- MATTHEW A. ROSENTHAL & ERIN E. HANNON 601 Cues to Perceiving Tonal Stability in Music: The Role of Temporal Structure

ÉRICO ARTIOLI FIRMINO & JOSÉ LINO OLIVEIRA BUENO	613	<b>Interkey Distances Also Shorten Subjective Time Reproductions in Real Modulating Tonal Music</b>
FRÉDÉRIC BIMBOT, EMMANUEL DERUTY, GABRIEL SARGENT, & EMMANUEL VINCENT	631	<b>System &amp; Contrast: A Polymorphous Model of the Inner Organization of Structural Segments within Music Pieces</b>
BRIAN C. WESOLOWSKI, STEFANIE A. WIND, & GEORGE ENGELHARD, JR.	662	<b>Examining Rater Precision in Music Performance Assessment: An Analysis of Rating Scale Structure Using the Multifaceted Rasch Partial Credit Model</b>
